Commercial Dungeness Crab Fishery Overview

Christy Juhasz; Christy.Juhasz@wildlife.ca.gov
WG Orientation Meeting
September 3, 2019
Santa Rosa
Commercial Regulations

• Regulated by State Legislature
• Management Scheme: 3 S’s
  • Sex – males only
  • Size – minimum size 6.25”
  • Season – occurs after molting period
    • 2 management areas at Sonoma/Mendocino county line
Location & Timing of the Fishery

- **Sept to Oct** – domoic testing starts; delays ???
- **Late-Oct to mid-Dec** - quality testing period; latest delay until Jan 15
- **Oct to July** - RAMP risk assessments
## Dungeness Crab Trap Limit Program

Trap Limit Program caps overall number of traps.

Dungeness Crab Task Force (DCTF)

• Established in 2008

• Dungeness crab fishery advisory group – recommendations forwarded to Legislature, Commission and CDFW

• Comprised of 17 commercial seats, and other industry members

• 2019 - Continues to work on fishery management issues with focus on domoic, quality, fair start, trap limit program, etc.

• Receive informational updates developed by Dungeness crab Working Group – also provides feedback
**Identifiable Entanglement Gear**

Dungeness crab is Top Fishery

Domoic Acid Delayed Crab Seasons

• “Derby” fishery
  o Highest effort at start of season

• Domoic acid delays shifts effort later

• 2015-16 Federally Declared Disaster season
  • Shifted high fishery effort in spring months
  • Coincided with presence of whales

Dungeness Crab Working Group

- Multi-Stakeholder group established in 2015
- Projects/Experts provide better understanding of entanglements
- Piloting and provide input/feedback on RAMP
- Formalized in statute in 2019 – Section 8276.1 FGC
  - Director interim authority to address entanglement risk
Best Practices Guide – Reducing Surface Gear

California Dungeness Crab Fishing

The National Marine Fisheries Service (NMFS) has confirmed a significant increase in reports of large whale entanglements over the last few years, specifically in California Dungeness crab fishing gear. This situation threatens the stability of the fishery and coastal fishing communities. Shifts in fishing practices toward increased surface line and the use of multiple surface buoys have been observed. Review of documented entanglements show a potential connection between slack surface line and the number of trailer buoys contributing to whale entanglements. In response, a Working Group developed this Best Practices Guide to highlight voluntary actions believed to be an important step towards reducing the risk of whale entanglement in commercial and recreational fishing gear. New regulatory measures limiting gear at the surface are currently in place for the 2018-2019 California Dungeness crab fishing season.

New Regulations!

Best Practices
- No excess lines should be floating at the surface. Floating lines should only be between the main buoy and trailer.
- When changing set location across depths, adjust the length of trap lines by adjusting shots (i.e., measured length of line to maintain vertical lines).
- Avoid setting gear in the vicinity of whales whenever possible.
- Communicate the locations of high whale activity with other fishermen.
- Maintain gear to ensure lines and buoys are in good working condition and will not break under natural conditions causing gear to become lost or irretrievable.
- All gear should be clearly marked consistent with applicable regulations.
- Use the minimum amount of scope required to compensate for tides, currents and weather.
- Remove all fishing gear by 11:59 pm on the last day of the season when gear is no longer allowed in the water.

Reporting Entangled Whales
Report entangled whales via FLEET to the NMFS whale entanglement response hotline at 1-877-SOUSA-NAL (1-877-768-7262) or call 911. Coast Guard on Channel 16. If possible, stand by for response. Immediate reporting is critical to give the best chance for response teams to remove life-threatening gear from the whale and gather information to understand where, when, and how entanglements occur to reduce potential future entanglements.

By providing information about an entangled whale, you can play an integral role in the disentanglement operation. Photographs of the whole, the area of entanglement, and the entangled gear is a great way to inform important information. Please maintain a distance of at least 100 yards for the safety of you and the whale.

Respond Promptly if Contacted by NMFS or CDFW
If you are contacted by NMFS, California Department of Fish and Wildlife (CDFW), or any other government agency regarding a whale entangled in your gear, please respond and provide as much information as possible about your fishing gear and practices to help the agency better reduce the risk of entanglements in the future.

Do not attempt to disentangle the whale. Removing the entangled gear at the surface will void the life-threatening lines attached to the whale and may make it impossible for responders to detect and remove these lines. Disentangling a whale can be a very dangerous process and should be left to those trained specifically to do so.

This guide was developed by the California Dungeness Crab Fishing Working Group. For more information, including a fact sheet, background materials, and other key resources like this guide, visit opc.ca.gov/whale-entanglement-working-group.

For questions about this Best Practices Guide, email info@crabworkinggroup.com. If you have suggestions for reducing entanglements in fishing gear, contact Dan Lavaren, NMFS Protected Resources Division, at Dan.Lavaren@noaa.gov or 612-680-5299.
Working Group 2019 Tasks Ahead

• Continued Gear modification testing (Demo Day - Sept. 6)
• Department draft RAMP regulations – Nov. 1, 2020
• Drafting Conservation Plan for Incidental Take Permit under Federal ESA – May 15, 2020
