Re: Middle Struve Slough Water Quality and Habitat Enhancement Project

Dear Ocean Protection Council:

On behalf of the Santa Cruz County Flood Control and Water Conservation District – Zone 7, I am writing to offer strong support for the City of Watsonville’s Middle Struve Slough Water Quality and Habitat Enhancement Project. This project represents a collaboration between the City of Watsonville, Watsonville Wetlands Watch and many other project partners to develop measures to protect and enhance the water quality, coastal wetlands and watershed habitat within the City and the Watsonville Slough System. The Watsonville Slough System is the largest coastal wetlands between Elkhorn Slough to the south and Pescadero Marsh to the north. At 800 acres, the slough system represents one of California’s last remaining large and contiguous coastal freshwater wetlands, which support over 270 resident and migratory bird species and 23 different native plants and animals that are listed as threatened, endangered, or species of special concern.

The City of Watsonville is a State recognized disadvantaged community. This project will use creative and meaningful community engagement strategies that will provide targeted benefits to those who will be disproportionately affected and are most vulnerable to the impacts of climate change. Project implementation will result in improved and safe public access to coastal natural resources for Watsonville residents, will improve surface water quality, and provide a high quality demonstration project that integrates meaningful community engagement and watershed and stormwater enhancement in a way that is replicable throughout Coastal California. The project will also utilize an extensive effort to encourage diverse community participation throughout the implementation process and will emphasize youth participation and paid internships for Watsonville area youth in a way that recognizes the value of their participation.

The Santa Cruz County Flood Control and Water Conservation District – Zone 7 is a State-designated Special District charged with reducing flood risk within the Pajaro River system within Santa Cruz County, including within the Watsonville Slough. The District accomplishes

this mission, in part, through strong collaboration with the City of Watsonville on capital investment and operational projects. The District strongly supports this unique multi-benefit project and urges OPC to provide the funding needed to bring habitat enhancement, water quality protection, and climate-change resilience to economically disadvantaged communities in the City of Watsonville.

We look forward to partnering with the City of Watsonville on this important project and we thank you for your consideration of this work which will provide essential and much needed resources for Watsonville's unique coastal environment and community.

Sincerely,

MATT MACHADO
District Engineer

Regeneración - Pajaro Valley Climate Action works with many community partners to inspire everyone in the Pajaro Valley to respond locally to the global challenge of a changing climate. We support cross-sector initiatives that promote equitable climate resiliency by reducing carbon emissions and enhancing adaptation to rapidly changing conditions.

Re: Middle Struve Slough Water Quality and Habitat Enhancement Project

Dear Ocean Protection Council,

I am writing on behalf of Community Action Board of Santa Cruz County, Inc. (CAB) to offer my strong support for the City of Watsonville's Middle Struve Slough Water Quality and Habitat Enhancement Project. This project represents a collaboration between the City of Watsonville, Watsonville Wetlands Watch and many other project partners to develop measures to protect and enhance the water quality, coastal wetlands and watershed habitat within the City and the Watsonville Slough System. The Watsonville Slough System is the largest coastal wetlands between Elkhorn Slough to the south and Pescadero Marsh to the north. At 800 acres, the slough system represents one of California's last remaining large and contiguous coastal freshwater wetlands, which support over 270 resident and migratory bird species and 23 different native plants and animals that are listed as threatened, endangered, or species of special concern.

The City of Watsonville is a State recognized disadvantaged community. This project will use creative and meaningful community engagement strategies that will provide targeted benefits to those who will be disproportionately affected and are most vulnerable to the impacts of climate change. Project implementation will result in improved and safe public access to coastal natural resources for Watsonville residents, will improve surface water quality, and provide a high-quality demonstration project that integrates meaningful community engagement and watershed and stormwater enhancement in a way that is replicable throughout Coastal California. The project will also utilize an extensive effort to encourage diverse community participation throughout the implementation process and will emphasize youth participation and paid internships for Watsonville area youth in a way that recognizes the value of their participation.

As Santa Cruz County's designated Community Action agency dedicated to joining with the community to fight poverty and create social change, CAB understands how critically important it is for our climate solutions to protect and include the perspectives of community members most impacted by climate change. CAB's Watsonville Works! program, whose participants are dedicated to cleaning up Watsonville's levies and sloughs as they transition back into the workforce, is part of CAB's contribution to this important effort within the climate change movement.

We look forward to partnering with the City of Watsonville on this important project and we thank you for your consideration of this work which will provide essential and much needed resources for Watsonville's unique coastal environmental and community.

Sincerely,

Maria Elena De La Garza
